Welcome to find support for water protection!

The Tools for water protection is a web-based toolbox providing support for implementing water protection actions at local level, for people who do concrete work, strategic planning or make decisions of water protection in cities, municipalities, companies, NGOs or other organisations.

Toolbox provides information and tools for water protection. In the Bank of Actions you can browse actions that local organisations have implemented for protection of the local waters and the Baltic Sea – and share your own actions as well!

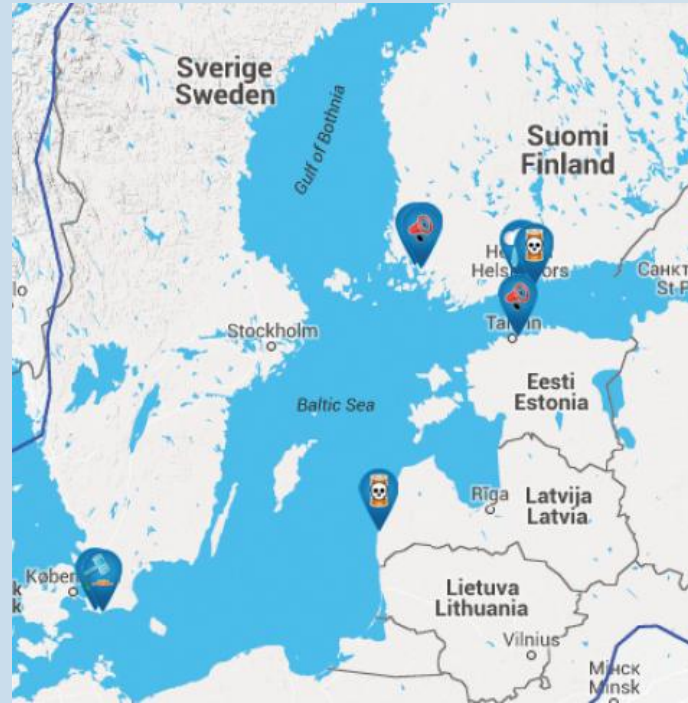

This page was established in 2015 the EU Life+ funded project CITYWATER in collaboration with the Baltic Sea Challenge. The first tools are based on the results and lessons learned from the CITYWATER project. Today the page is operated by the Baltic Sea Challenge. More tools and actions are wanted – contact us and tell your ideas!
